# REPEAL

Thousands stand to lose coverage in Massachusetts in the *California v. Texas* court case, which threatens to repeal the Affordable Care Act (ACA).

In 2006, Massachusetts secured federal financing to develop a subsidized coverage program that helped it achieve the highest insurance rate in the country even before the ACA was in place. The full impact of ACA repeal on Massachusetts depends on whether it is able to revert to 2006 coverage programs and levels of eligibility; it is unknown if this would occur if the ACA is repealed.

2006 COVERAGE PROGRAMS REESTABLISHED?

NO

**422K** <sup>LOSS</sup>

Massachusetts residents would lose health care coverage

**12% Uninsured**

Number of uninsured would more than double. Uninsured rate would increase from 4.4% to 12% of the population under age 65

**Undo Gains**

Uninsured rate would be much higher than before implementation of ACA in 2014 and the state's reform in 2006

**\$3.3 Billion**

Federal spending on health care in Massachusetts would decline by \$3.3 billion per year

YES

**69K** <sup>LOSS</sup>

Massachusetts residents would still lose health care coverage

If federal government helps fund reestablishment of 2006 programs

**\$2.1 Billion**

Federal health care funding for Massachusetts would still shrink by \$2.1 billion per year (decline of 25% compared to 2020 funding)

**\$988 Million**

State spending would have to increase by \$988 million per year (increase of 24% over present-day spending)

Without federal funds

**\$2.1 Billion**

State spending would have to increase by \$2.1 billion per year (increase of 51% over present-day spending)
